Ivermectin Wins in India. By **Justus Hope.**

News of India's defeat of the Delta variant should be common knowledge. It is just about as obvious as the nose on one's face. It is so clear when one looks at the graphs that no one can deny it.

Yet, for some reason, we are not allowed to talk about it. Thus, for example, Wikipedia cannot mention the peer-reviewed meta-analyses by Dr. Tess Lawrie or Dr. Pierre Kory published in the American Journal of Therapeutics.

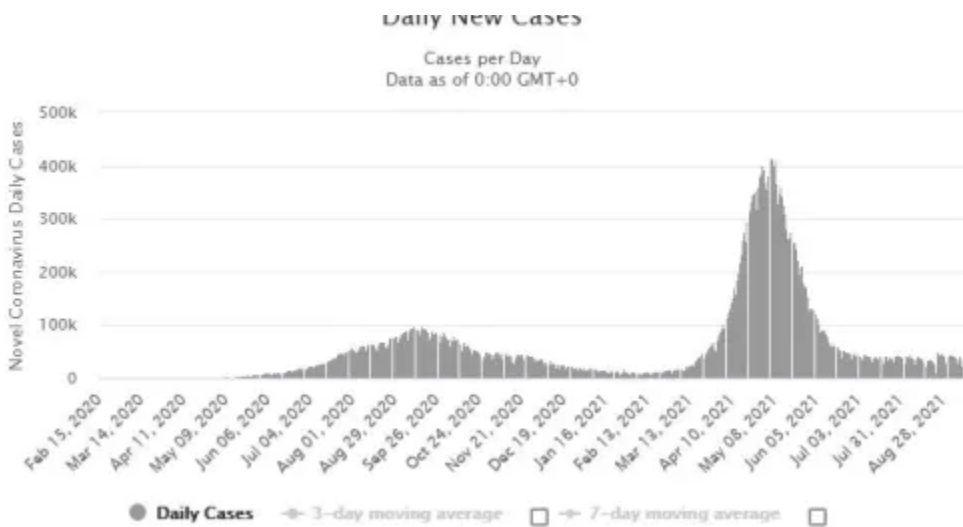

Wikipedia is not allowed to publish the recent meta-analysis on Ivermectin authored by Dr. Andrew Hill. Furthermore, it is not allowed to say anything concerning www.ivmmeta.com showing the 61 studies comprising 23,000 patients which reveal up to a 96% reduction in death [prophylaxis] with Ivermectin.

One can see the bias in Wikipedia by going on the "talk" pages for each subject and reading about the fierce attempts of editors to add these facts and the stone wall refusals by the "senior" editors who have an agenda. And that agenda is not loyalty to your health.

The easy way to read the "talk" page on any Wikipedia subject is to click the top left "talk" button. Anyone can then review the editors' discussions.

There is a blackout on any conversation about how Ivermectin beat COVID-19 in India.

When I discussed the dire straits that India found itself in early this year with 414,000 cases per day, and over 4,000 deaths per day, and how that evaporated within five weeks of the addition of Ivermectin, I am often asked, "But why is there no mention of that in the news?"

Yes, exactly. Ask yourself why India's success against the Delta variant with Ivermectin is such a closely guarded secret by the NIH and CDC. Second, ask yourself why no major media outlets reported this fact, but instead, tried to confuse you with false information by saying the deaths in India are 10 times greater than official reports. ...

Daily figures for August 5:

Uttar Pradesh on Ivermectin: Population 240 Million [4.9% fully vaccinated]

COVID Daily Cases: 26

COVID Daily Deaths: 3

Delhi on Ivermectin: Population 31 Million [15% fully vaccinated]

COVID Daily Cases: 61

COVID Daily Deaths: 2 ...

The United States off Ivermectin: Population 331 Million [50.5% fully vaccinated]

COVID Daily Cases: 127,108

COVID Daily Deaths: 574

Tamil Nadu announced they would reject Ivermectin and instead follow the dubious USA-style guidance of using Remdesivir. Knowing this, you might expect their numbers to be closer to the US, with more cases and more deaths. You would be correct. Tamil Nadu went on to lead India in COVID-19 cases. ...

Tamil Nadu off Ivermectin: Population 78.8 Million [6.9% fully vaccinated]

COVID Daily Cases: 1,997

COVID Daily Deaths: 33

Notice a pattern?

Countries do orders of magnitude better with Ivermectin. It might be comparable to the difference in travel between using an automobile versus a horse and buggy. ...

YouTube and Wikipedia both consider Ivermectin for COVID as heresy.

“YouTube doesn’t allow content that spreads medical misinformation that contradicts local health authorities or the World Health Organization’s (WHO) medical information about COVID-19... Treatment misinformation: claims that Ivermectin is an effective treatment for COVID-19.”

India’s Ivermectin Blackout – Part III: The Lesson of Kerala. By the same author. Kerala has taken the same path as the West, and compared to other Indian states is doing poorly with covid.

The New York Times reported India’s colossal drop in COVID cases was unexplainable, while the BBC declared that Kerala’s rise was also a mystery. While new cases of COVID in Uttar Pradesh are rare as million-dollar lottery tickets, in Kerala, a tiny state located in southern India, new daily cases are the same as the United States, nearly one case per thousand. Yet, as we have seen in this series, there has been a curious media blackout on India’s overall success against COVID. ...

Kerala has continued to have the majority of new daily cases and almost 25% of India’s daily deaths despite a population of 34 million, less than 3% of India’s total population. ...

On August 15, Kerala accounted for 18,582 of India’s 32,937 new cases and 102 of India’s 417 new deaths. By contrast, the Ivermectin-using state of Delhi, with nearly the same population size, recorded only 53 new cases and ZERO deaths. In comparison, Uttar Pradesh, with almost eight times as many inhabitants, had only 30 new cases and ONE death. ...

What could Kerala be doing wrong?

Hint: Over-reliance on vaccines and under-reliance on Ivermectin.

Uttar Pradesh led India in its use and has done even better than Delhi because they use Ivermectin early and preventatively. Uttar Pradesh has a policy of treating all the contacts of an infected patient prophylactically with Ivermectin. In other words, in Uttar Pradesh, everyone in the house gets Ivermectin treatment even if only one is infected. Ivermectin is known to reduce mortality in infected and dramatically lowers the viral load, thereby helping reduce the

spread of the virus to others. ...

Despite a widespread attempt by the media and WHO to convince the world that India has dropped Ivermectin by citing the DGHS, the ICMR and AIIMS have not changed their position, and Ivermectin remains in the India National Protocol.

While Kerala included Ivermectin in their state's guideline in April, they restricted it's use to only in Class B – severe cases or those with associated disease, making its use much less than if mild cases were allowed. This meant it was reserved as a late treatment if used at all. Finally, Kerala abandoned Ivermectin use altogether on August 5, 2021. ...

The most problematic feature is Kerala's high vaccination rate compared to the other Indian States. While vaccination should be a good thing, it can have severe negative consequences when it leads to rampant viral transmission. ... Vaccination may give a state a false sense of security.

His lesson:

Ivermectin can make up for the low use of vaccination. However, vaccination cannot make up for the low use of Ivermectin.

It is a disgrace – a science scandal of the ages – that the West is ignoring and traducing ivermectin, when the evidence is there for all to see. India has shown us, even doing real-time experiments of different treatments in different states. Why the fixation on vaccines in the West? On the face of it, it just doesn't make sense.
