

The data says you should never breastfeed your baby after you've been vaccinated

But the CDC says the opposite: that it will protect your baby. They are lying to you once again. They have NO risk-benefit study that was ever done. The CDC is totally irresponsible in their advice.

Executive summary

The data says not to breastfeed: it has killed or seriously injured infants.

But the [CDC, without any study whatsoever on the all-cause risk-benefit, says it's fine. They are irresponsible and wrong.](#)

Introduction

If you received the COVID vaccine and are breastfeeding your baby, [you should stop breastfeeding immediately and read this story now:](#)

Real-Time Magazine analysis reveals a concerning issue almost no one talks about: serious side effects and deaths of breastfed infants whose mothers received the COVID-19 vaccine

20 ספטמבר 2022 | Ranit Feinberg | [English](#)

Participated in the analysis of the reports: Shani Cohen, attorney Galit Potachnik and Shirley van der Veldt

- Despite the lack of clinical studies, and even animal safety studies, health authorities did not hesitate to give the green light to the administration of Pfizer's and Moderna's mRNA vaccines to pregnant and lactating women a few weeks after they themselves stated that they did not have such studies. In Israel, the MOH even made a U-turn in a record time of four days, when already on December 20 a

This story appeared on September 20, 2022. It was ignored by all worldwide mainstream media. It only recently started getting attention because Dr. Naomi Wolf talked about it.

Furthermore, do not vaccinate your baby

It is well established that the vaccines are [unsafe for young adults, no matter how young](#).
Now read this article about babies who have been vaccinated:

Breaking: 58 babies who received mRNA COVID-19 vaccines suffered life-threatening adverse events

| צפיית 61317 [f](#) [t](#) [w](#)

An analysis of VAERS reports shows that contrary to the FDA's briefing document claiming that the majority of adverse events in Pfizer's clinical trial were non-serious – at least 58 cases of life-threatening side effects in infants under 3 years old who received mRNA vaccines were reported. For some, it is unclear if they survived. It is also unclear why the infants were vaccinated, and whether they were part of the clinical trials. However, in the upcoming FDA meeting on Wednesday, the FDA will not be able to argue it did not know

13 יוני 2022 | Ranit Feinberg & Yaffa Shir-Raz | [English](#)

The CDC never did any study on the risk-benefit of breastfeeding or vaccinating infants

Here's [their recommendation](#). No all-cause risk-benefit study was ever done to justify their recommendation.

A mom in my mother's group got vaxxed while nursing her 8 month old. Baby broke out in terrible hives and was taken to hospital. The child had been previously healthy. That was over a year ago. Sadly, the baby has spent over a year in and out of the hospital with serious health crises. Now the baby has been diagnosed with juvenile arthritis. Unbelievably, mom won't see the connection between the jab and what has happened to her child.

Those articles were published in Yaffa Shir-Raz's Real Time Magazine. Yaffa is also the one who broke the story on the leaked video of the Israeli MOH meeting, also in Real Time Magazine.

A few years ago she also broke the story on the secret Sci-B-Vac experiment approved by the MOH to be conducted on day-old infants in Israel (you're going to want to be sitting down for this one):

Sci-B-Vac - The HighWire with Del Bigtree

There is one important thing to add in. Breast milk has lipid nanoparticles of microRNA that affects gene expression in infants and the mothers use that to help the babies adapt to the environment. This was a major reason why I felt the claim the mRNA lipid nanoparticles would be unable to affect human DNA (given what natural oral microRNA lipid nanoparticles could do) was not true and also why there would be issues with the vaccines affecting breast milk. Here is one example of an article on the topic:

<https://www.nature.com/articles/d41586-020-01768-w>

Breast milk is an amazing superfood for children, and a lot of vital components go into it that are almost never appreciated by the medical system (so the effects of something like mRNA lipid nanoparticles on it would never be considered). Within medicine, the main focus has always been to just get mothers to stop breastfeeding their babies so

ody should be vaccinated with the COVID “vaccines,” especially kids and mothers who are breastfeeding.

Any “parent” who would have a baby or an infant or for that matter a child injected with an experimental treatment this should be investigated for child abuse.

The CDC needs to correct their advice ASAP, before more babies are killed.

~~But more comments...~~ They’ll try to discredit all of these reports. They aren’t ever going to admit they made a mistake that kills babies, not in my lifetime.
