What do Oklahoma and Portugal have in common? Not much, besides mRNA vaccine failure

Meanwhile, New Mexico makes bad numbers disappear the easy way, by ending reporting

Alex Berenson

Last year, Portugal was the boss of bosses when it came to mRNA vaccines.

Ask everyone's favorite newspaper of record, The New York Times:

In Portugal, There Is Virtually No One Left to Vaccinate

Portugal is among the most highly vaccinated countries in the world. Vice Adm. Henrique Gouveia e Melo, who led the campaign, said there was a key to his success: Keep politics out of it.

KEEP POLITICS OUT OF IT, YOU HEAR ME?

Given Portugal's long history of fascism, keeping politics out of it was probably a good idea. But I digress. Virtually no one left to vaccinate. Wow. Portugal must be a Covid-free paradise these days!

Or maybe not:

Portugal ▼

All time ▼

Portugal has had multiple Covid waves since that Times article, and the new one is the biggest yet. The national health authorities are blaming it on yet another Omicron variant, BA.5, coming soon to a highly mRNA jabbed state or country near you.

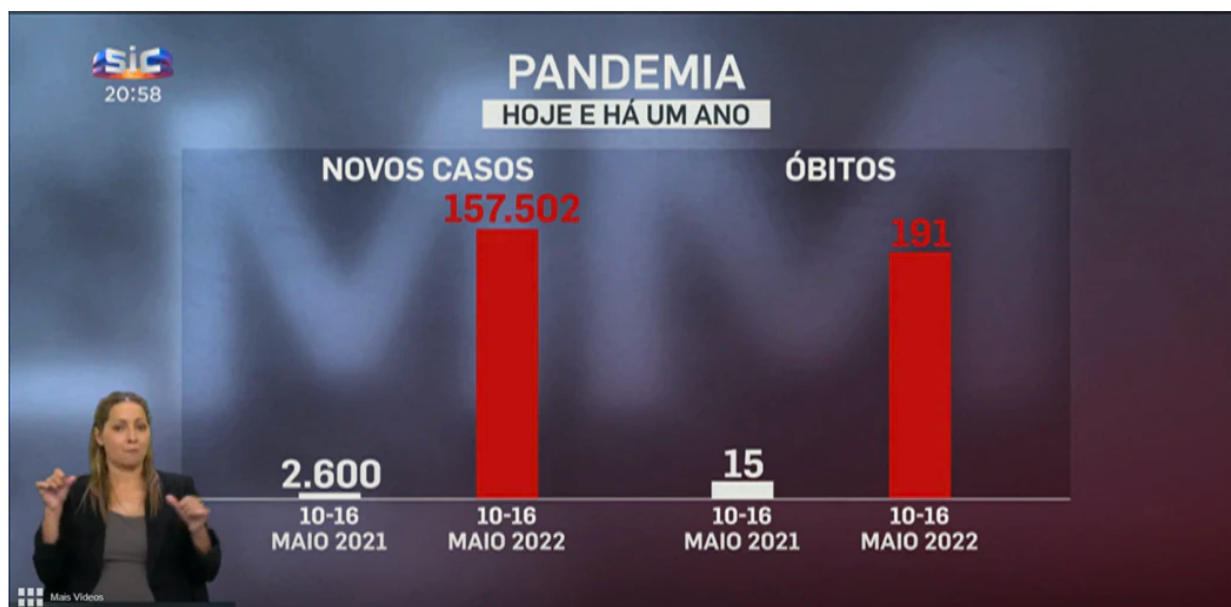

Also worth noting is the fact that even after Portugal's winter wave subsided, infections remained at a level higher than all but one previous peak; highly mRNA vaccinated

countries do not seem to get back to a zero-infection baseline, ever.

But nobody in Portugal is dying, right? Because when you get Covid after getting the miracle shots, you don't die, right?

After all, Pfizer and Dr. Anthony Fauci and the Financial Times said so. And Pfizer and Dr. Anthony Fauci and the Financial Times never lie!

About *that*:

Surprising figures emerged during last night's commentary by Luís Marques Mendes

SOURCE

Yes, despite the No-Death mRNA Guarantee (TM), people in Portugal are in fact dying of Covid. In fact, about 30 are now dying every day, equivalent to almost 1,000 Americans. The toll is likely to rise further, given how quickly infections have taken off.

Vaccine fanatics hate these trends. They cannot stop them, so they're doing the next best thing, hiding the numbers.

(STORY BELOW IS PAYWALLED FOR SUBSCRIBERS ONLY FOR 48 HOURS)

As the Albuquerque Journal reported Saturday:

COVID-19 cases in New Mexico have ticked up 121% in about a month and plenty of those are breakthrough cases, according to weekly epidemiology reports.

But we don't know how many.

About a month ago the state Department of Health quietly removed from its weekly epidemiology reports data that compared the most recent four weeks of cases, hospitalizations and deaths among unvaccinated, vaccinated and vaccinated and boosted people. The removal of the breakthrough case data came as a greater share of people who were getting sick with COVID-19 had been vaccinated.

SOURCE

The usual public health bureaucrats had the usual explanation for deleting the data: the numbers don't look good, thus the proles cannot be allowed to see them. As New Mexico's state epidemiologist, Dr. Christine Ross, told the Journal:

You're going to have to trust that our goal is to present information that makes sense... If you stick on this one methodology, which is using – it's a very simple type of analysis using observational data – I think you're kind of missing the boat.

Yes, why offer simple and clear numbers when you can make up complicated ones? Strangely, when the data last year showed the shots were working as promised, New Mexico had no problem putting them out.

Ross also told the Journal that every other state and local health department that had been breaking out Covid data by vaccine status has stopped doing so.

Fortunately, it turns out that Ross was... not quite telling the truth. States like New Mexico and Vermont (both deeply blue and with high vaccination levels, shocker) have cut back on

the data they're reporting. Others have not.

The most recent report from Oklahoma, for example, shows that about 80 percent of the people hospitalized for Covid - 95 out of 122 people - were partly or fully vaccinated.

DISTRIBUTION OF RECENT COVID-19 HOSPITAL ADMISSIONS BY AGE GROUP AS OF MAY 16, 2022*

Vaccination Status	Age Group	Hospital Admissions in the last 30 days***	Percent Vaccination
Non-Vaccinated	Under 1- 4	1	3
	5-17	0	0
	18-35	3	1
	36-49	2	7
	50-64	8	2
	65+	12	4
	Unknown	1	3
	Total	27	10
Fully Vaccinated*	5-17	0	0
	18-35	5	5
	36-49	5	5
	50-64	16	1
	65+	59	6
	Unknown	0	0
	Total	85	10
Partially Vaccinated**	5-17	0	0
	18-35	0	0
	36-49	0	0
	50-64	0	0
	65+	10	10
	Unknown	0	0
	Total	10	10
Total Hospitalizations		122	

* Data are preliminary and subject to change as more information is gathered, reviewed and in the table above (hospital admissions by vaccination status) will be limited to cases reported

This 80-20 vaccinated to unvaccinated split is particularly striking, because Oklahoma has relatively low vaccination rates. Oklahoma is 80% fully vaccinated, including fewer than 10% of children.

Type your email... **Subscribe**

Thus Oklahoma appears to have slipped into negative vaccine effectiveness - not just for infections, but for Covid hospitalizations. The trend is recent and accelerating.

Covid still has some seasonality, and the summer spike has not yet begun in Oklahoma, so I realize this is clearly anecdotal, but in my office, out of 18-20 people, I'm the only one with infections and hospitalizations remain relatively low. But the last two years suggest that unvaccinated. Every other person in my office are "fully vaccinated." Prior to the vaccine, only one person got Covid. Since the start of vaccination, every other co-worker has gotten Covid. A trend will change within weeks, and the last month suggests that nearly all those people will be vaccinated. couple have gotten it twice. plus RSV. Normal colds. Stomach bugs. Me? Nothing. Not even a sniffle. The only thing I've taken is daily doses of vitamins D3 and C. Quercetin and Zinc. In fact The synchronized global failure of the mRNA vaccines is becoming impossible to hide. everyone I know that has been jabbed has gotten Covid.

The real question now is how bad it will become.

My best friend is a "true believer" in these mRNA shots. No matter what info, including expert research, data results etc, I give to him, he tells me I'm drinking the "kool-aid".

It's useless to even try anymore. At this point it seems we're preaching to the choir.
